Education

St. Peter's College of Toril, Inc.

Bachelor of Science in Information Technology

Aug 2023 – Expected March 2027

Davao City, Davao Del Sur

Relevant Coursework

- Data Structures & Algorithms
- Database Systems
- Object-Oriented Programming
- Event-Driven Programming

Projects

Biometric Attendance System | *Python, FastAPI, TypeScript, React, PostgreSQL*

Jan 2026

- Built a web-based attendance system integrated with ESP32 and fingerprint authentication hardware.
- Designed RESTful APIs to bridge the frontend and biometric device, handling real-time data securely.
- Modeled the database schema to support multi-user enrollment, logging, and reporting.
- Deployed frontend on Vercel and backend on Render as a live, continuously running application.

VaultPass | *Python, Django, JavaScript, React, PostgreSQL*

Jul 2026

- Built a personal password manager implementing end-to-end AES-256-GCM encryption and PBKDF2 key derivation.
- Integrated WebAuthn biometric authentication (fingerprint, Face ID, hardware keys) alongside JWT-based auth with token rotation.
- Designed a normalized PostgreSQL schema across 4 modular Django apps with role-based permissions and secure session handling.

GitStats | *Python, Django, JavaScript, React, PostgreSQL*

Aug 2026

- Built a multi-tenant Django REST API that syncs GitHub repositories, stars, forks, and contributor activity, and auto-generates a live, always up-to-date GitHub profile README.
- Implemented secure GitHub authentication via Firebase Identity with server-side OAuth token exchange, keeping the client secret off the browser.
- Designed a rule-based auto-categorization engine that classifies repositories (Web, Mobile, AI, API, CLI, IoT, Game, etc.) with confidence scoring, and built a Celery-powered background task queue for scheduled README auto-updates.

SpendTracker | *PHP, Laravel, Blade, Bootstrap, PostgreSQL*

Mar 2026

- Developed a personal finance web app for tracking incomes, budgets, and expenses.
- Built dynamic dashboard views for expenses and wishlists using Laravel and Blade templating.
- Deployed via Docker on Render with a PostgreSQL backend, resolving HTTPS and proxy configuration issues.

Experience

Full-Stack Developer (Academic & Personal Projects)

2024 – Present

Self-Directed — Coursework & Independent Projects

Remote

- Consistently shipped full-stack web applications across academic and personal projects, applying industry-standard practices end-to-end.
- Worked across the full stack using React, Django, FastAPI, and Node.js; integrated cloud services including Supabase, Cloudinary, Render, and Vercel.
- Served as the sole full-stack developer on a capstone team, building and deploying a biometric attendance system on time while teammates handled documentation and testing.
- Independently scoped, designed, and deployed multiple projects — managing architecture, version control, and deployment without supervision.

Technical Skills

Languages: Java, C#, JavaScript, Python, TypeScript, PHP, C++
Frontend: HTML, CSS, React, Next.js, React Native, Tailwind CSS, Bootstrap
Backend: Node.js, Express.js, Django, FastAPI, Spring Boot, Laravel
Databases: MySQL, PostgreSQL, MongoDB, Firebase, Supabase
Tools: Git, GitHub, Postman, Figma, Render, Vercel, Docker, Bash

Certificates

- **Java Fundamentals** | *Coddy* — Jul 2026
- **Python OOP** | *Coddy* — Aug 2026
- **Java Logic & Flow** | *Coddy* — Jul 2026
